

URANIUM IN SASKATCHEWAN

Positioned for Discovery of a Commodity Positioned for Recovery

Roughrider Exploration Limited is an exploration stage uranium company, focused on the Genesis project that it has optioned from Kivalliq Energy Corporation.

Roughrider Exploration is led by an experienced and accomplished Board of Directors, including Dale Wallster. Dale was responsible for discovering the 2006 Roughrider Deposit in Saskatchewan on behalf of Hathor Exploration which was eventually bought by Rio Tinto Group for \$650 Million.

Targeting high-grade, near-surface Uranium in the Athabasca Basin Region

Genesis Property

200,677 Hectares

Wallster previously held significant portions in 2005.

4 promising focus exploration areas have been identified.

Over 30 known showings, and almost no drilling.

Drill targets refined at Jurgan 1 & 2 based on the 2015 ground VLF/EM and MAG, and biogeochemical surveys.

Numerous geochemical and EM/radiometric geophysical target areas requiring follow-up.

Genesis Target Areas and Summary

The Genesis property is largely situated within the same structural corridor (WMTZ/WWD) that hosts the Collins Bay, Eagle Point, Rabbit Lake, and Raven-Horseshoe deposits. As such, it holds considerable potential for undiscovered basement-hosted uranium mineralization.

Working with Dale Wallster on its initial claim acquisition phase, Kivalliq Energy undertook an extensive desktop analysis of the historical and current data documenting the geology, geochemistry, geophysics and prospects of a large region extending 150 km northeast beyond the Athabasca Basin to identify the trends most likely to be associated with uranium mineralization.

Roughrider's September 2014 \$1.2 million work program included a 5,984 line kilometer airborne DIGHEM magnetic, EM and radiometric survey (410 km of EM conductors outlined); and the collection of 291 lake sediment samples, 1,347 enzyme leach (EL) soil samples, 162 biogeochemical samples, and 16 rock samples.

Roughrider verified five target areas. Jurgen 1, Jurgen 2, Johnston/GAP, Kingston and Burrill Bay/Daniels Bay all exhibit geochemical anomalies coincident with favourable geology and discreet geophysical signatures. Notably the 2014 work program generated EL soil sampling reports with numerous highly anomalous U values along EM conductor trends at Jurgen 1 and Jurgen 2.

In March 2015, Roughrider refined potential drill targets with the addition of a 69.2 line-km ground Mag & VLF/EM geophysics survey and collection of 545 biogeochemical samples at Jurgen 1 and Jurgen 2. At Jurgen 1, eight of 249 samples returned values above the 98th percentile for uranium and twenty-one samples returned values above the 95th percentile.

Due to the large number of potential targets on the Genesis property, the emphasis has been to develop drill targets in priority areas first. Drill targets are ranked using a combination of new and archival geophysical data, favourable lithologies and fault orientations, anomalous geochemical values, and any U-bearing metasedimentary boulder trains. Those targets displaying multiple positive features will be considered as strong candidates for future drilling.

Management & Directors

Dale Wallster, (Director)

Co-discovered Hathor's Roughrider deposit that was taken over by Rio Tinto as part of a \$650 million acquisition in 2012.

Wayne Hewgill, (Director)

Former mining analyst at PI Financial and Research Capital with 41 years of experience. Previously at BHP Billiton, Regulus, Antares.

Jay Sujir, J.D. (Director)

Securities and natural resources lawyer.

Alex Heath (Director)

Mr. Heath worked in Investment Banking at Salman Partners for eight years. He also managed all of Hathor Exploration's equity offerings. Currently, he is the Financial Analysis Manager at Seaspan Ship Management Ltd. and a director of Asante Gold

Mark Morabito B.A., J.D. (Director)

Founded Alderon Iron Ore, Excelsior Mining, Crosshair Exploration (Uranium), and King & Bay West. Over 15 years experience in capital-raising and corporate development

Scott F. Gibson, B. Comm., (CEO, Director)

Mr. Gibson has 15 years' experience with financing and marketing small cap resource companies. Co-founder of Precipitate Gold, Kitco Gibson Capital, Beneath the Surface Capital, Gibson Marketing and Sterling Marketing.

Andrew MacRitchie, BSc. Chartered Accountant (CFO)

With 15 years of experience in the natural resources sector, Mr. MacRitchie has worked with a variety of exploration stage resource companies, most recently Helio Resource Corp.

David Tupper, P.Geo (VP Exploration)

Over 30 years mineral exploration experience; 10 years management with Bearing Resources, Valley High Ventures and Solomon Resources.

Eric Coffin, B. Comm.(Advisor)

Hard Rock Analyst newsletter since 1995. Co-founder of Precipitate Gold; and Pediment Gold acquired by Argonaut for \$146M.
